

Lab: Implementing .gitignore to Ignore Unwanted Files and Folders

Objective

- Explain Git Ignore.
- Learn how to ignore unwanted files and folders using .gitignore.

1) Open Git Bash, Navigate to repository

Commands

```
cd D:/CTS-Assessments
```

2) Creating a .log File

```
touch sample.log
```

```
mkdir log
```

```
touch log/error.txt
```

3) Create/Open the .gitignore File

```
.gitignore
```

4) Verifying the Status of the Repository

5) Add the .gitignore File

```
git add .gitignore
```

6) Commit Changes

```
git commit -m "Added .gitignore file"
```

```
git status
```
